About Prospaa

Founded in 2019, Prospaa Bath reimagines bathrooms beyond traditional designs, empowering homeowners, businesses, and developers to reconnect with nature. Our mission is to create functional, inspiring spaces that enhance well-being.

Our Vision

At Prospaa, we believe that bathrooms are more than just functional rooms—they are personal sanctuaries where comfort, health, and wellness converge. Our designs go beyond aesthetics; they blend cutting-edge technology, sustainable materials, and exceptional quality to create spaces that resonate with individual needs and lifestyles.

Whether enhancing your home, adding value to a development, or incorporating wellness features into hospitality projects, Prospaa is the partner of choice for innovative bathroom solutions.

Our Approach

Unmatched Functionality and Aesthetics

Every bathroom we create is a blend of beauty and purpose. We craft spaces that are not only visually stunning but also functional and tailored to the unique needs of our clients.

Eco-Friendly Innovation

We prioritize sustainable materials and eco-conscious technologies to build a greener future. Our designs seamlessly integrate with nature, offering spaces that inspire relaxation and harmony.

Client-Centric Solutions

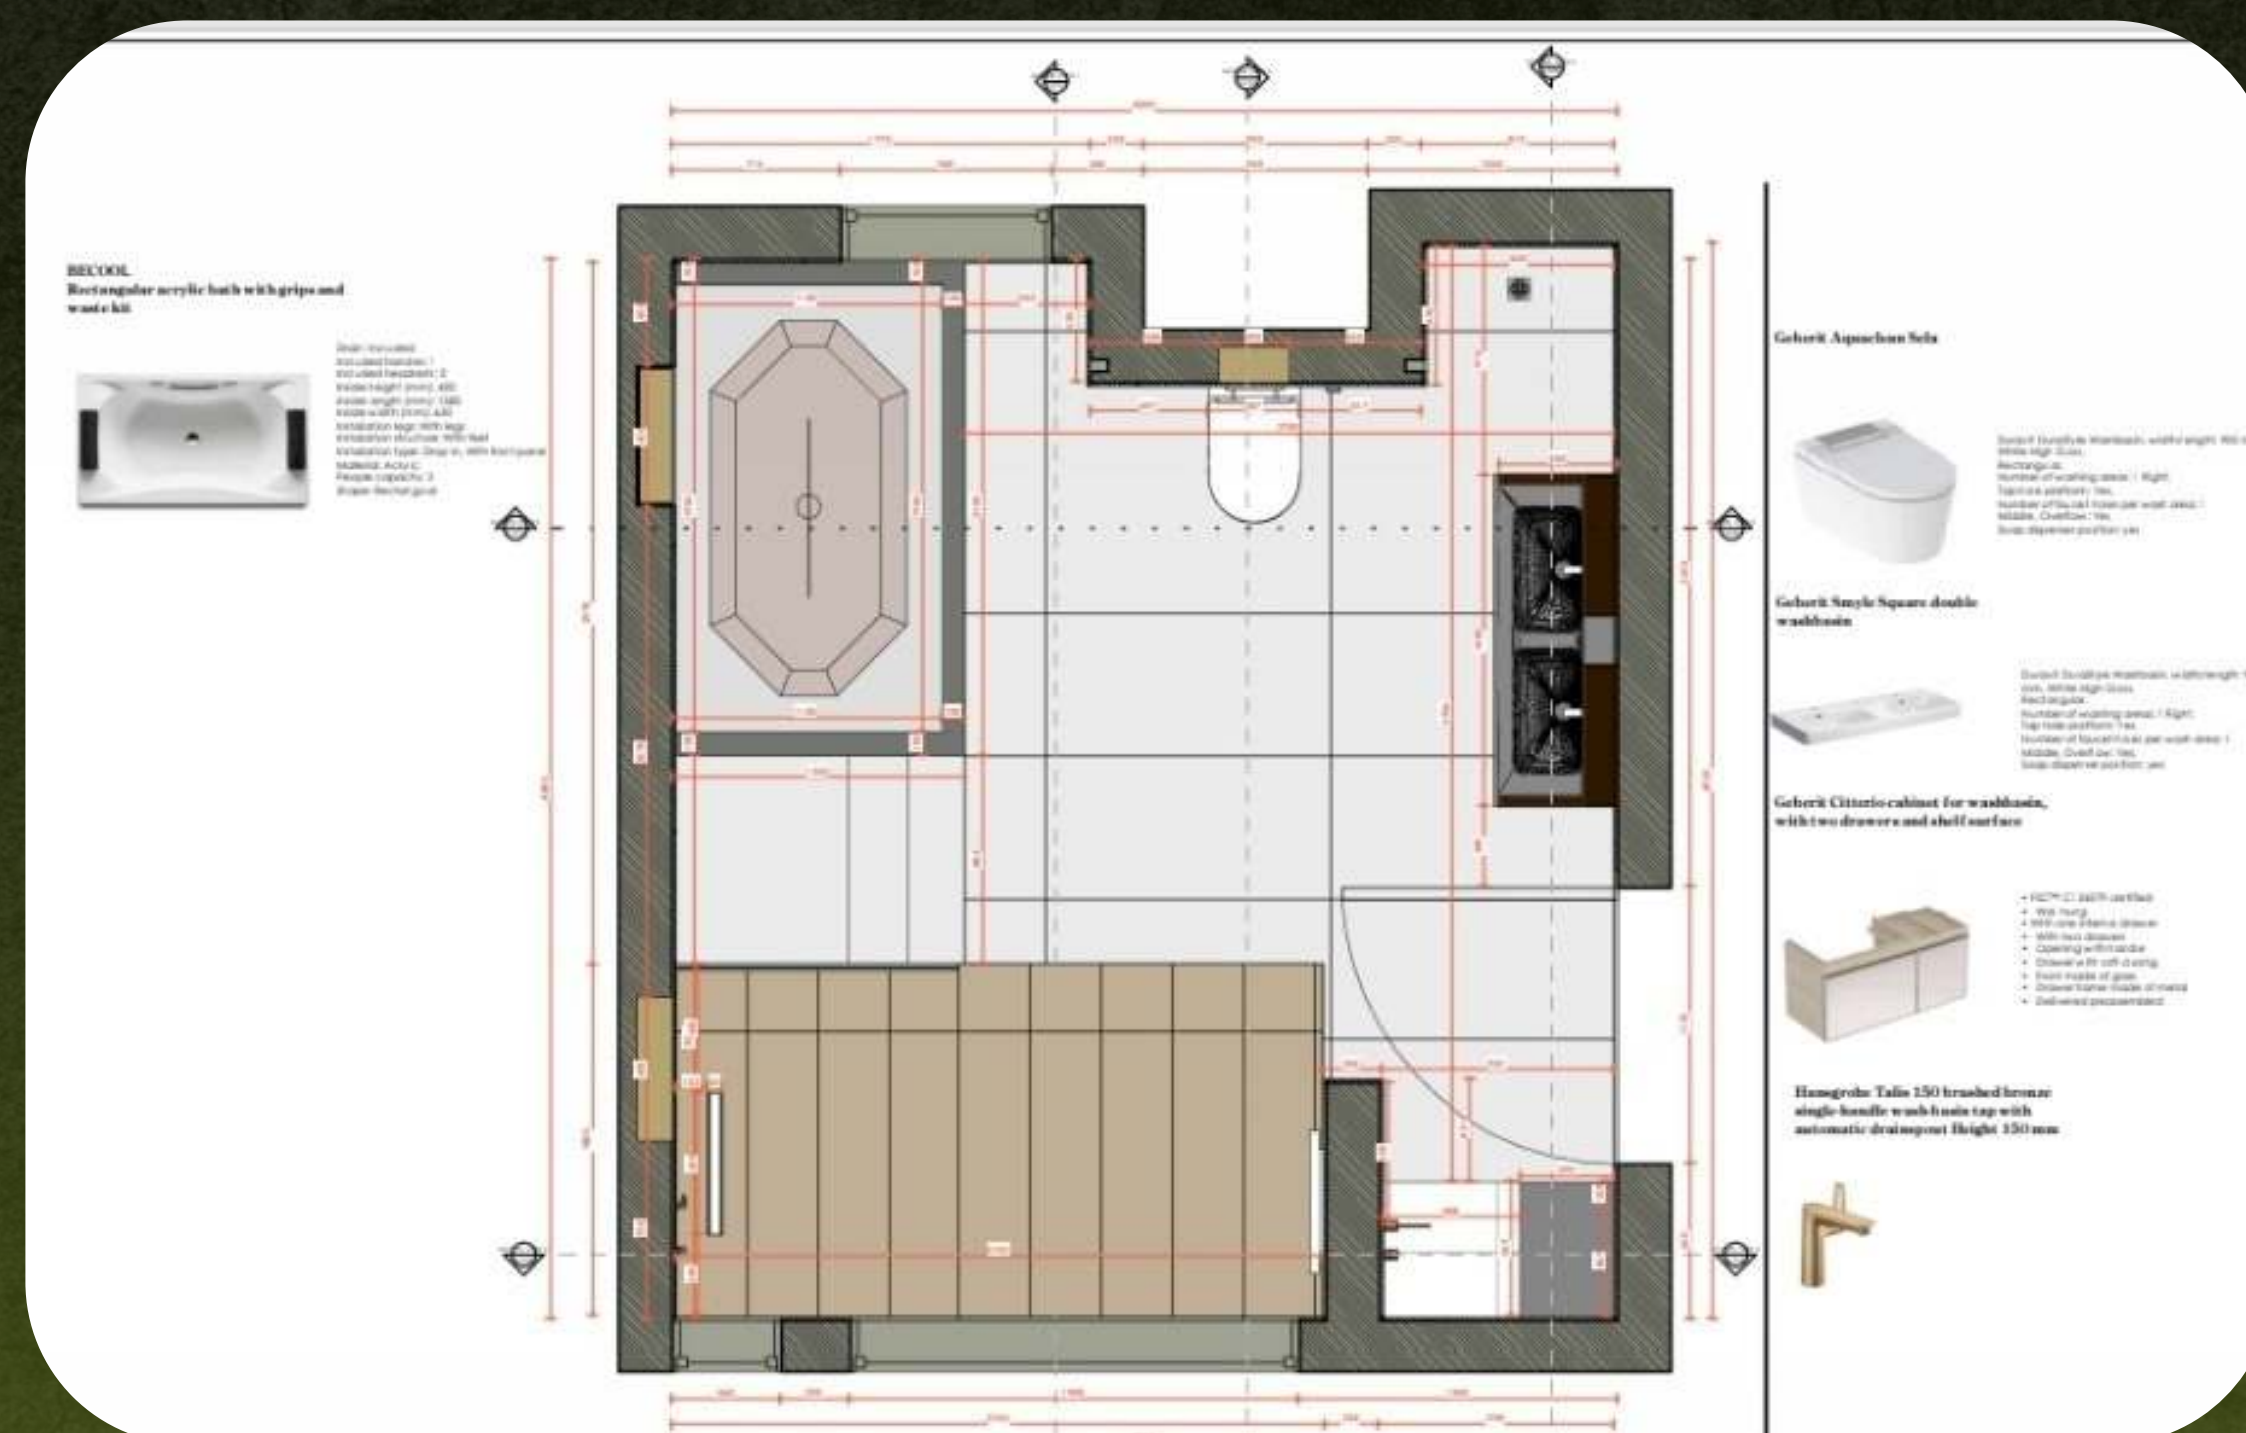

We cater to both private and corporate clients, ensuring personalized experiences that enhance every space and leave a lasting impression.

PD (Prospaa Design)

Bringing visions to life with innovative design and meticulous planning.

- ➔ Space Layout Design
- ➔ Project Survey & Consultation
- ➔ Supervision & Project Management
- ➔ VR and 3D Rendering

PPTS (Prospaa Plumbing and Tiling Services)

Ensuring functional, durable, and beautifully maintained spaces.

- ➞ Plumbing & Piping
- ➞ Product Installation & Tiling
- ➞ Bathroom Maintenance

Bathroom Clips (Product line)

Helping clients select and personalize bathroom products that blend design, functionality, and quality.

- ➔ Bathroom Products Supply
- ➔ Bespoke Bathroom Services

Pro X

The R&D arm of Prospaa, driving innovation to enhance the bathroom experience.

- ➡ Developing groundbreaking concepts and products
- ➡ Integrating advanced technology with eco-friendly solutions
- ➡ Pioneering new ways to combine aesthetics with functionality

Why Choose Prospaa?

- **Innovative Design:** Blending modern trends with timeless elegance.
- **Quality Assurance:** Using only premium materials and products.
- **Sustainable Focus:** Committed to eco-friendly solutions.
- **Timely Delivery:** Meeting deadlines without compromising quality.
- **Client-Centric Approach:** Personalized solutions tailored to each client's needs.

Rethinking the Bathroom Experience

We see bathrooms as more than just four walls. They are sanctuaries of wellness—a place for relaxation, inspiration, and renewal. By integrating natural elements and thoughtful design, we transform these spaces into havens of comfort and tranquility.

History & Invention

Bathroom history stretches back further than you might imagine. Originally, bathrooms were not developed with hygiene in mind, and the first records for the use of baths date back as far as 3000 B.C. At this time, water had a strong religious value and was seen as a purifying element for both body and soul.

Between 300 BC to date, a lot has changed on how we create access between humans and natural experience, creating a functional space and simplicity has been the idea for every invention. To the flush and cistern technology to the shower type technology, the unique bath tub experience for body and mental relaxation.

Tank invention

1905

Phoenix wooden cistern with patented flush valve. It is lined with lead and can be installed either high or low.

1952

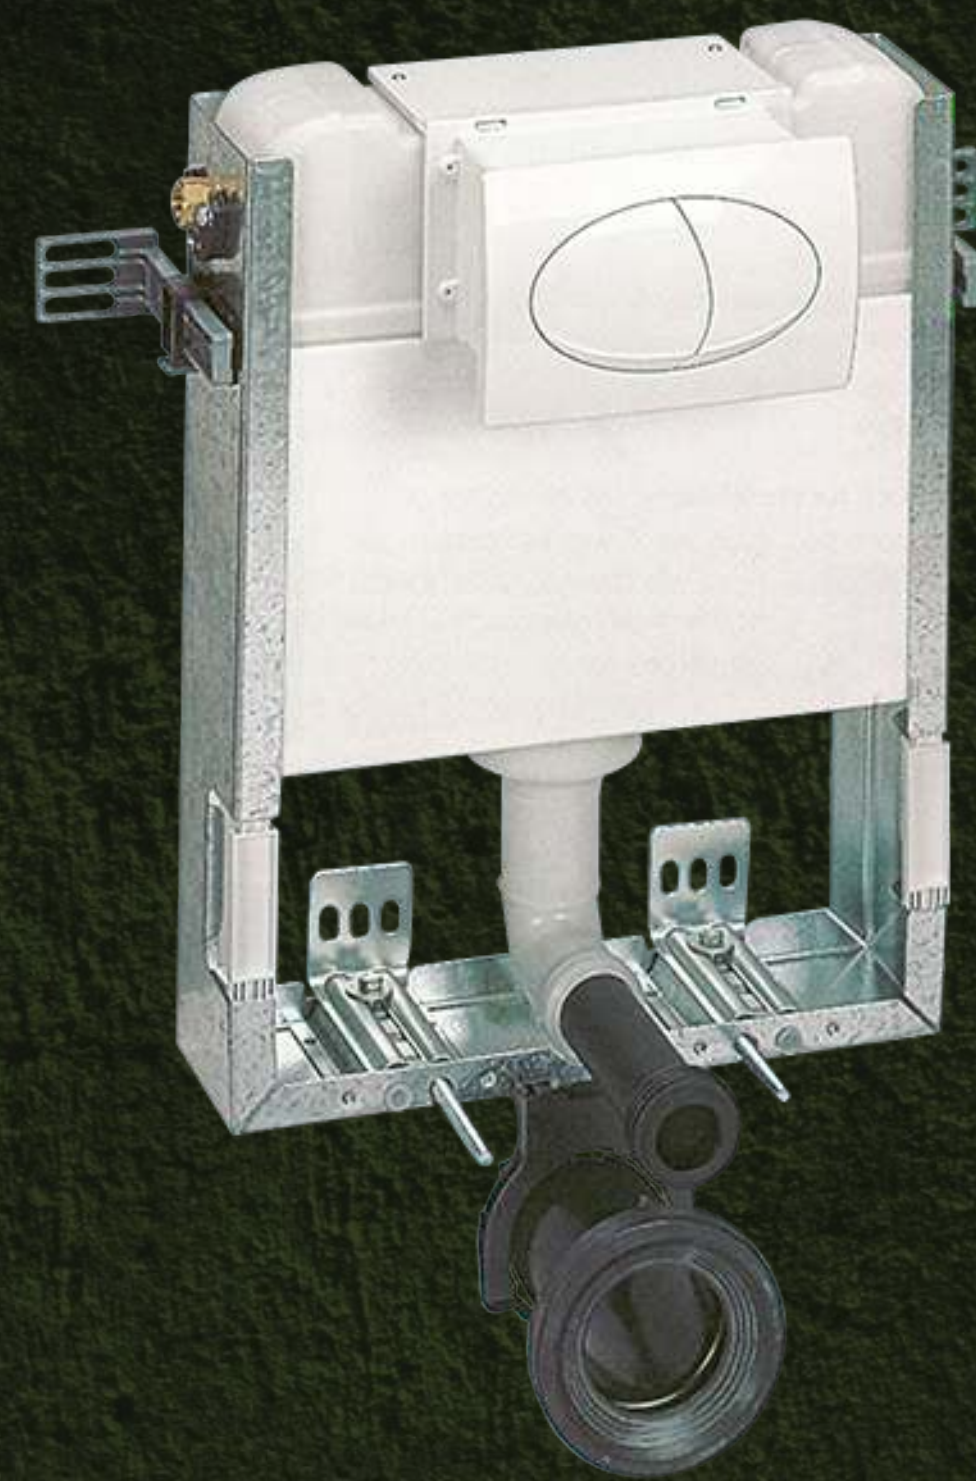

First plastic cistern made of PVC. It can be installed high or low. The cistern for WCs holds 14 litres of flush water, while the version for urinals holds seven. At 2.3 litres per second, the flush performance is impressive.

Tank invention

1964

First PVC cistern for wall-mounted installation.
Today, concealed cisterns are installed as standard in private bathrooms and public sanitary facilities.

1996

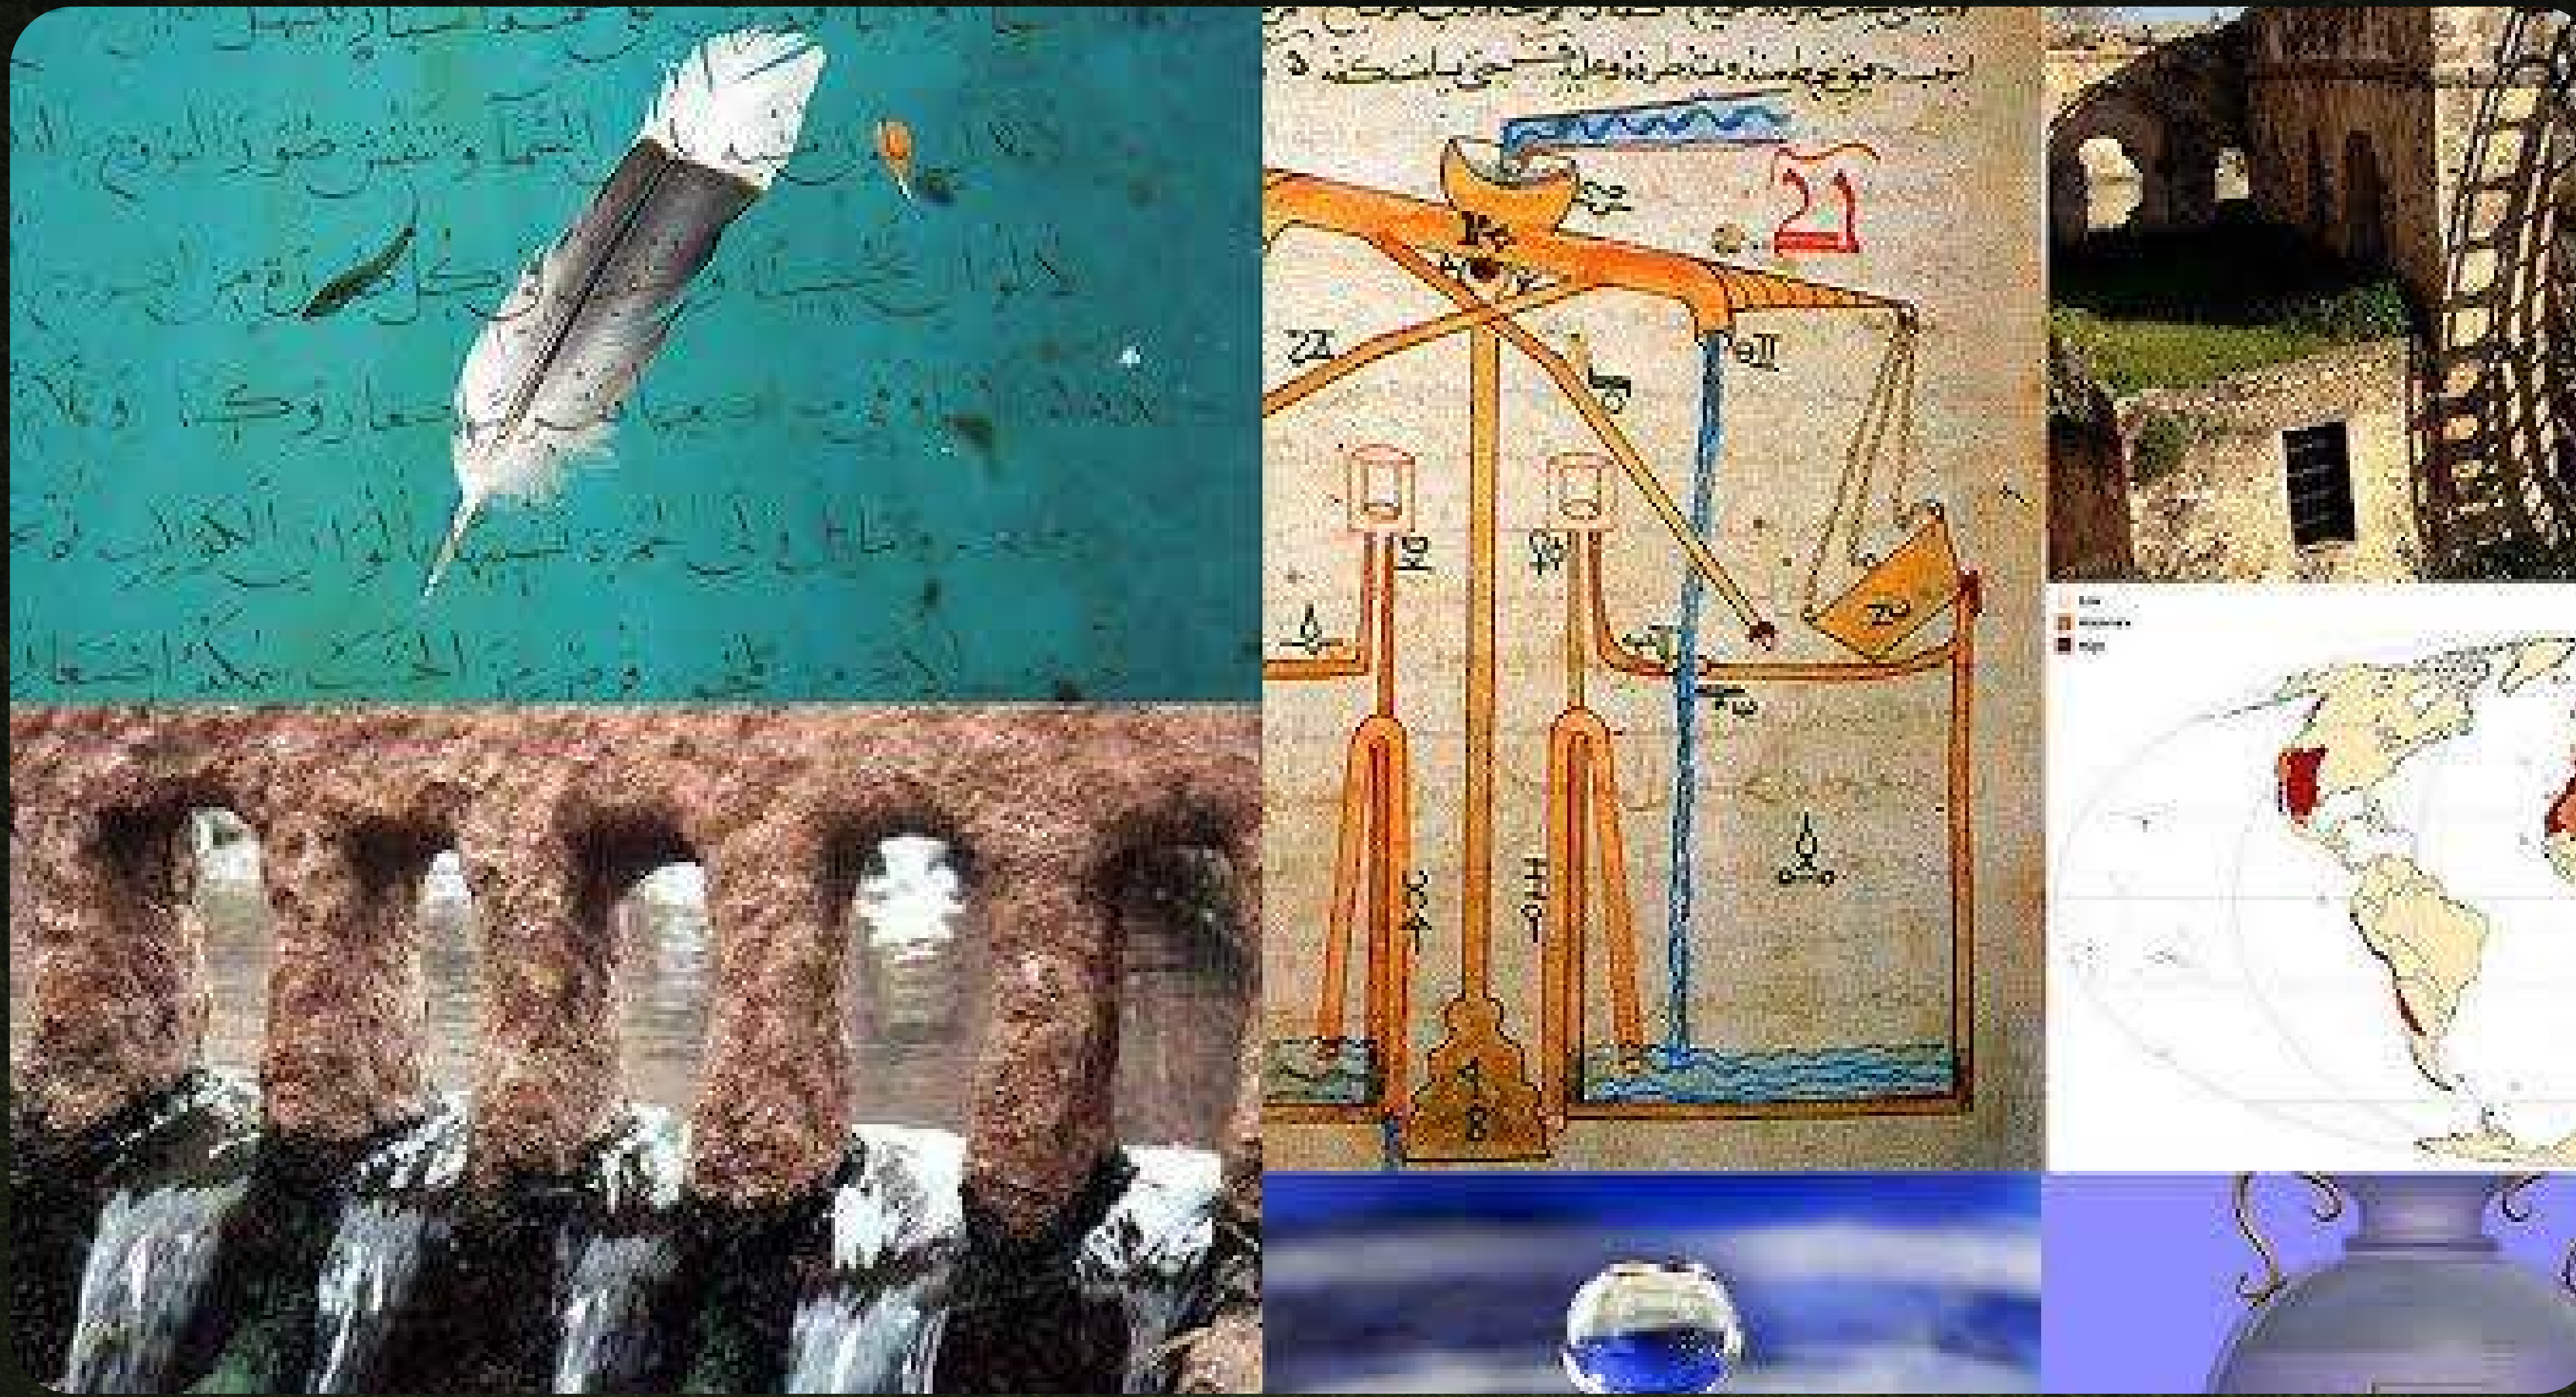

Duofix: universal and quick installation elements for all drywall construction tasks.
Today, Duofix is the most widely used installation system in the sanitary industry.

1983

Kombifix installation elements for in-wall installation. The elements for WCs, washbasins, urinals and bidets are fitted with all the necessary sanitary components at the factory, which makes installation easier and saves time.

Shower invention

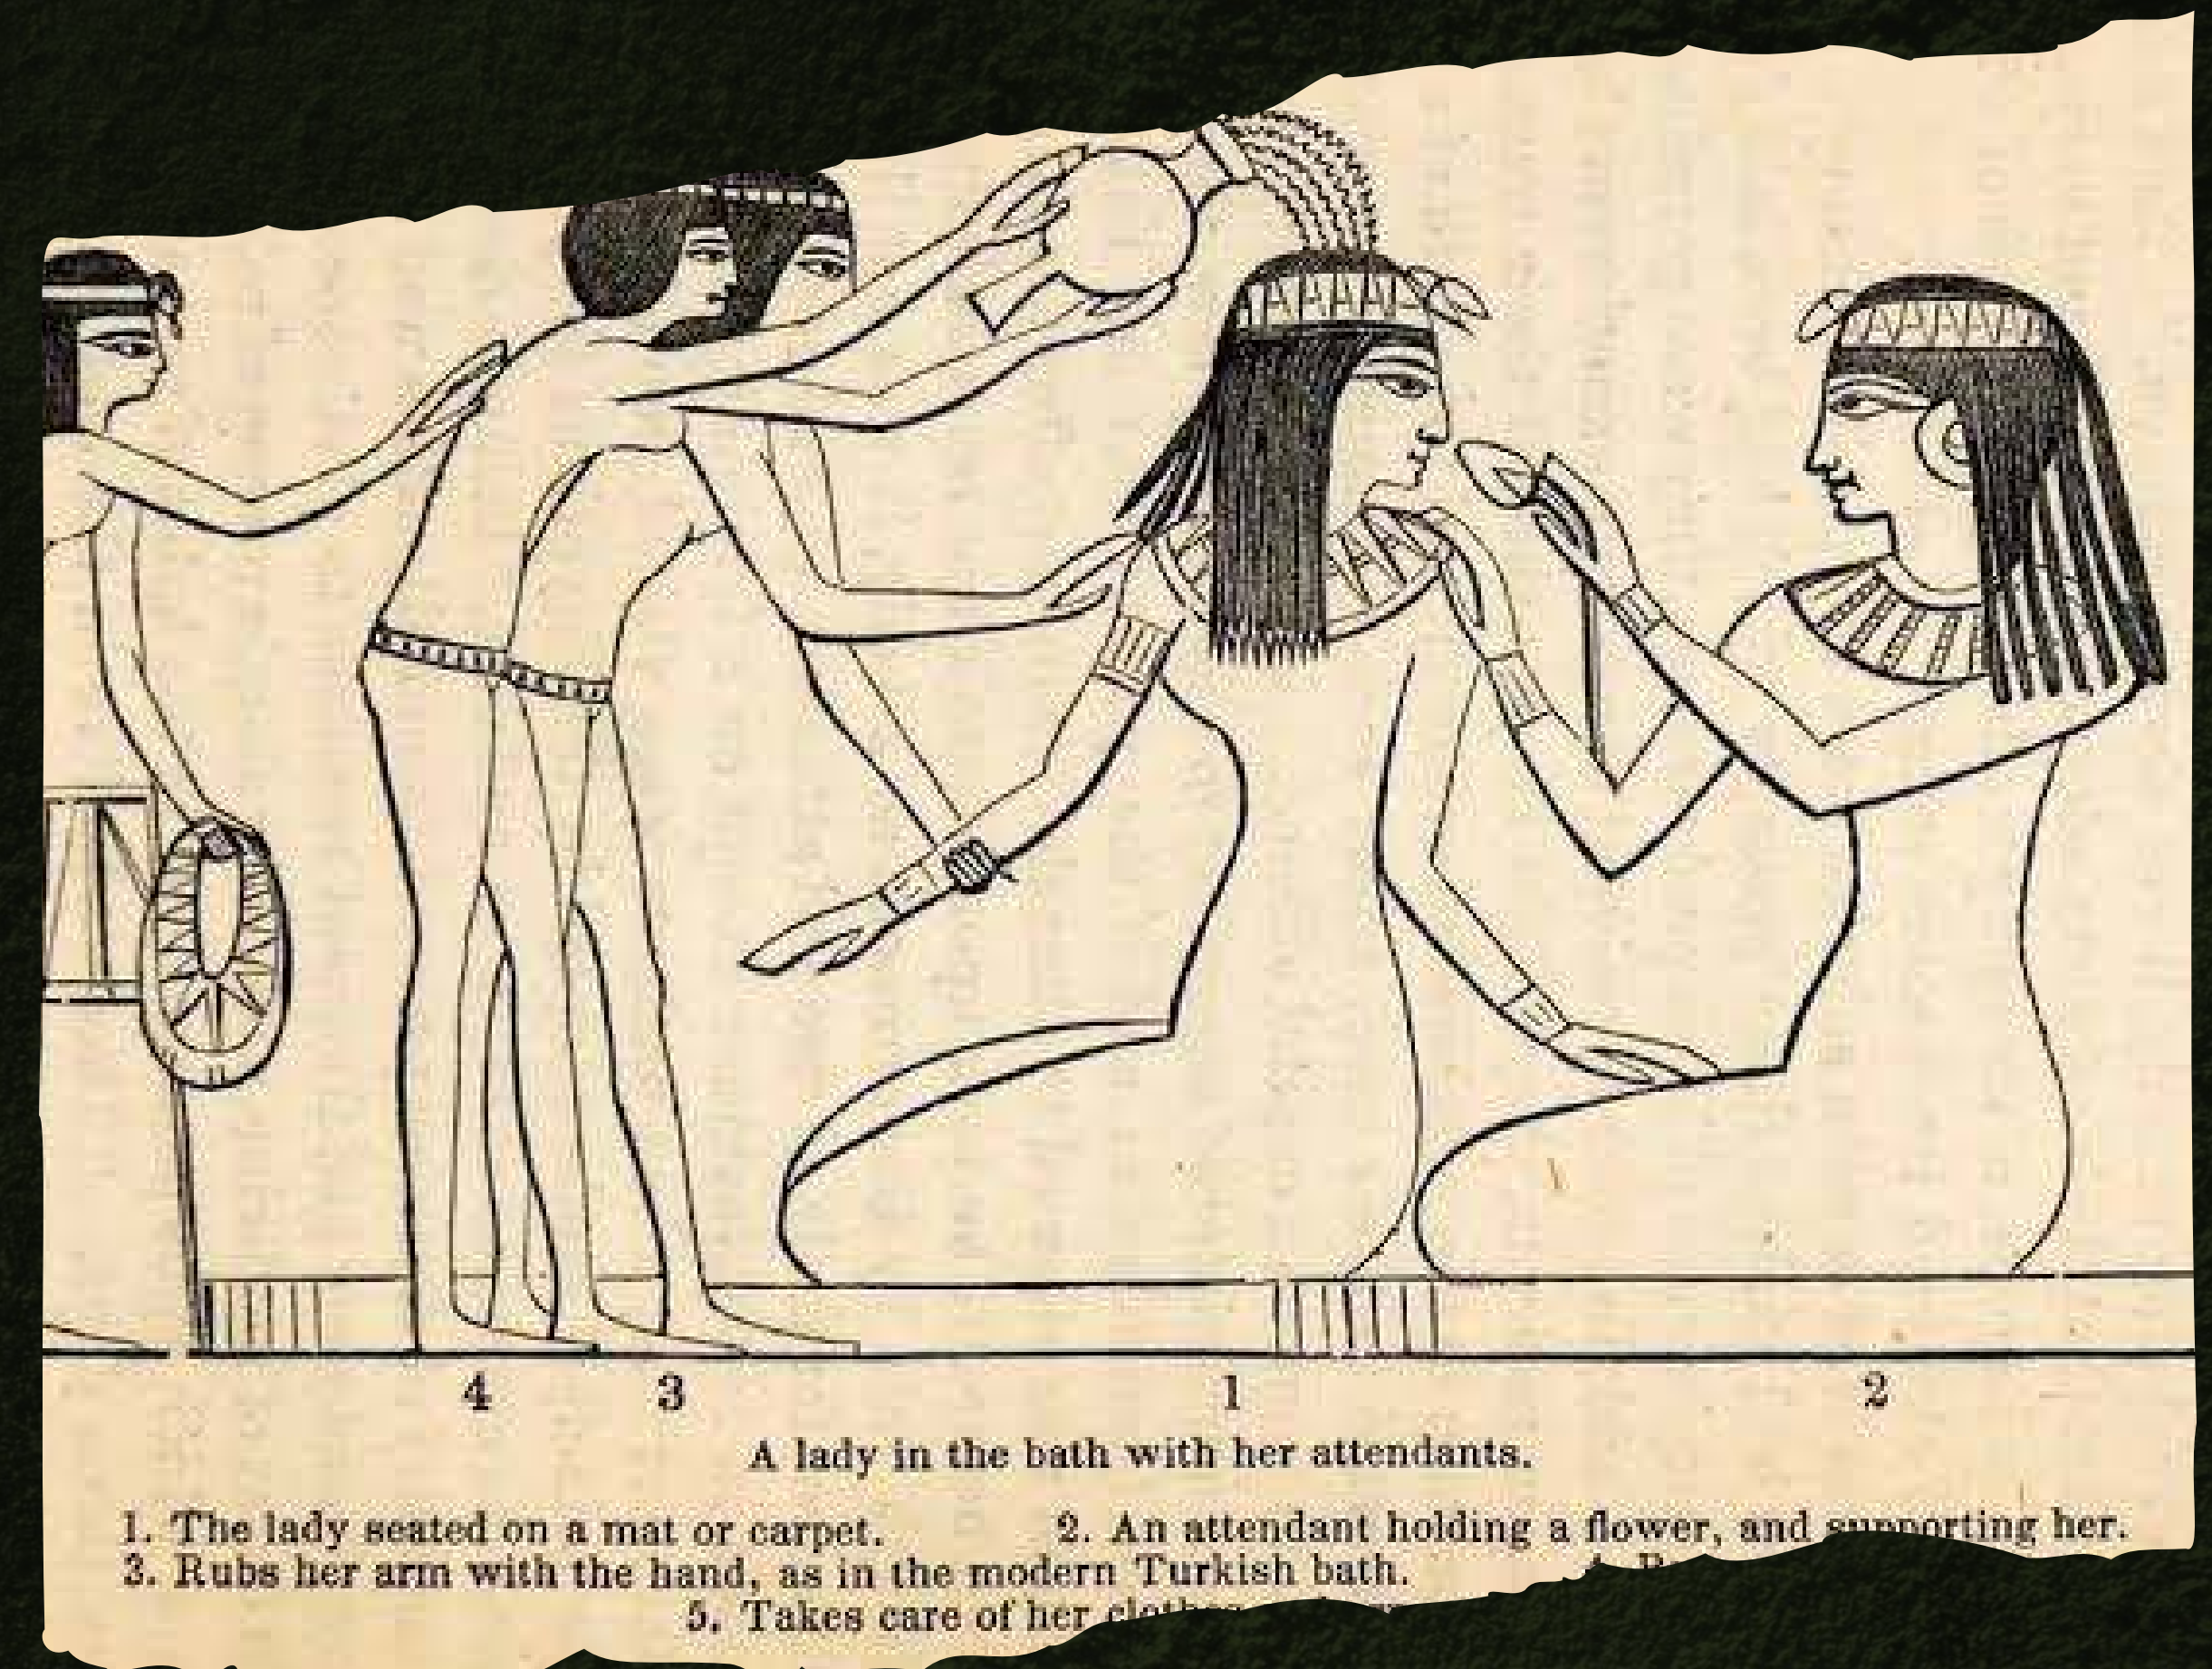

The First Shower (Natural water fountain)

We begin our journey with our ancestors who lived in caves and huts that they built from natural resources. All those centuries ago, the only powerful source of water was waterfalls. Ancient tribal people would simply stand under the falling water to clean themselves. Unlike today, where the majority of households have showers, people would have to travel miles to hunt out a waterfall, as this was a much more effective way of cleansing rather than bathing in a pool or lake.

The Ancient Egyptians

As society advanced, ceramic jugs were invented and the Egyptians were able to replicate the effects of a waterfall by pouring water over themselves. This was the first man-made way of showering.

The Egyptians also introduced an element of luxury and comfort to the bathing experience. Wealthy people in Egypt would order servants to bring jugs of water to dedicated shower rooms.

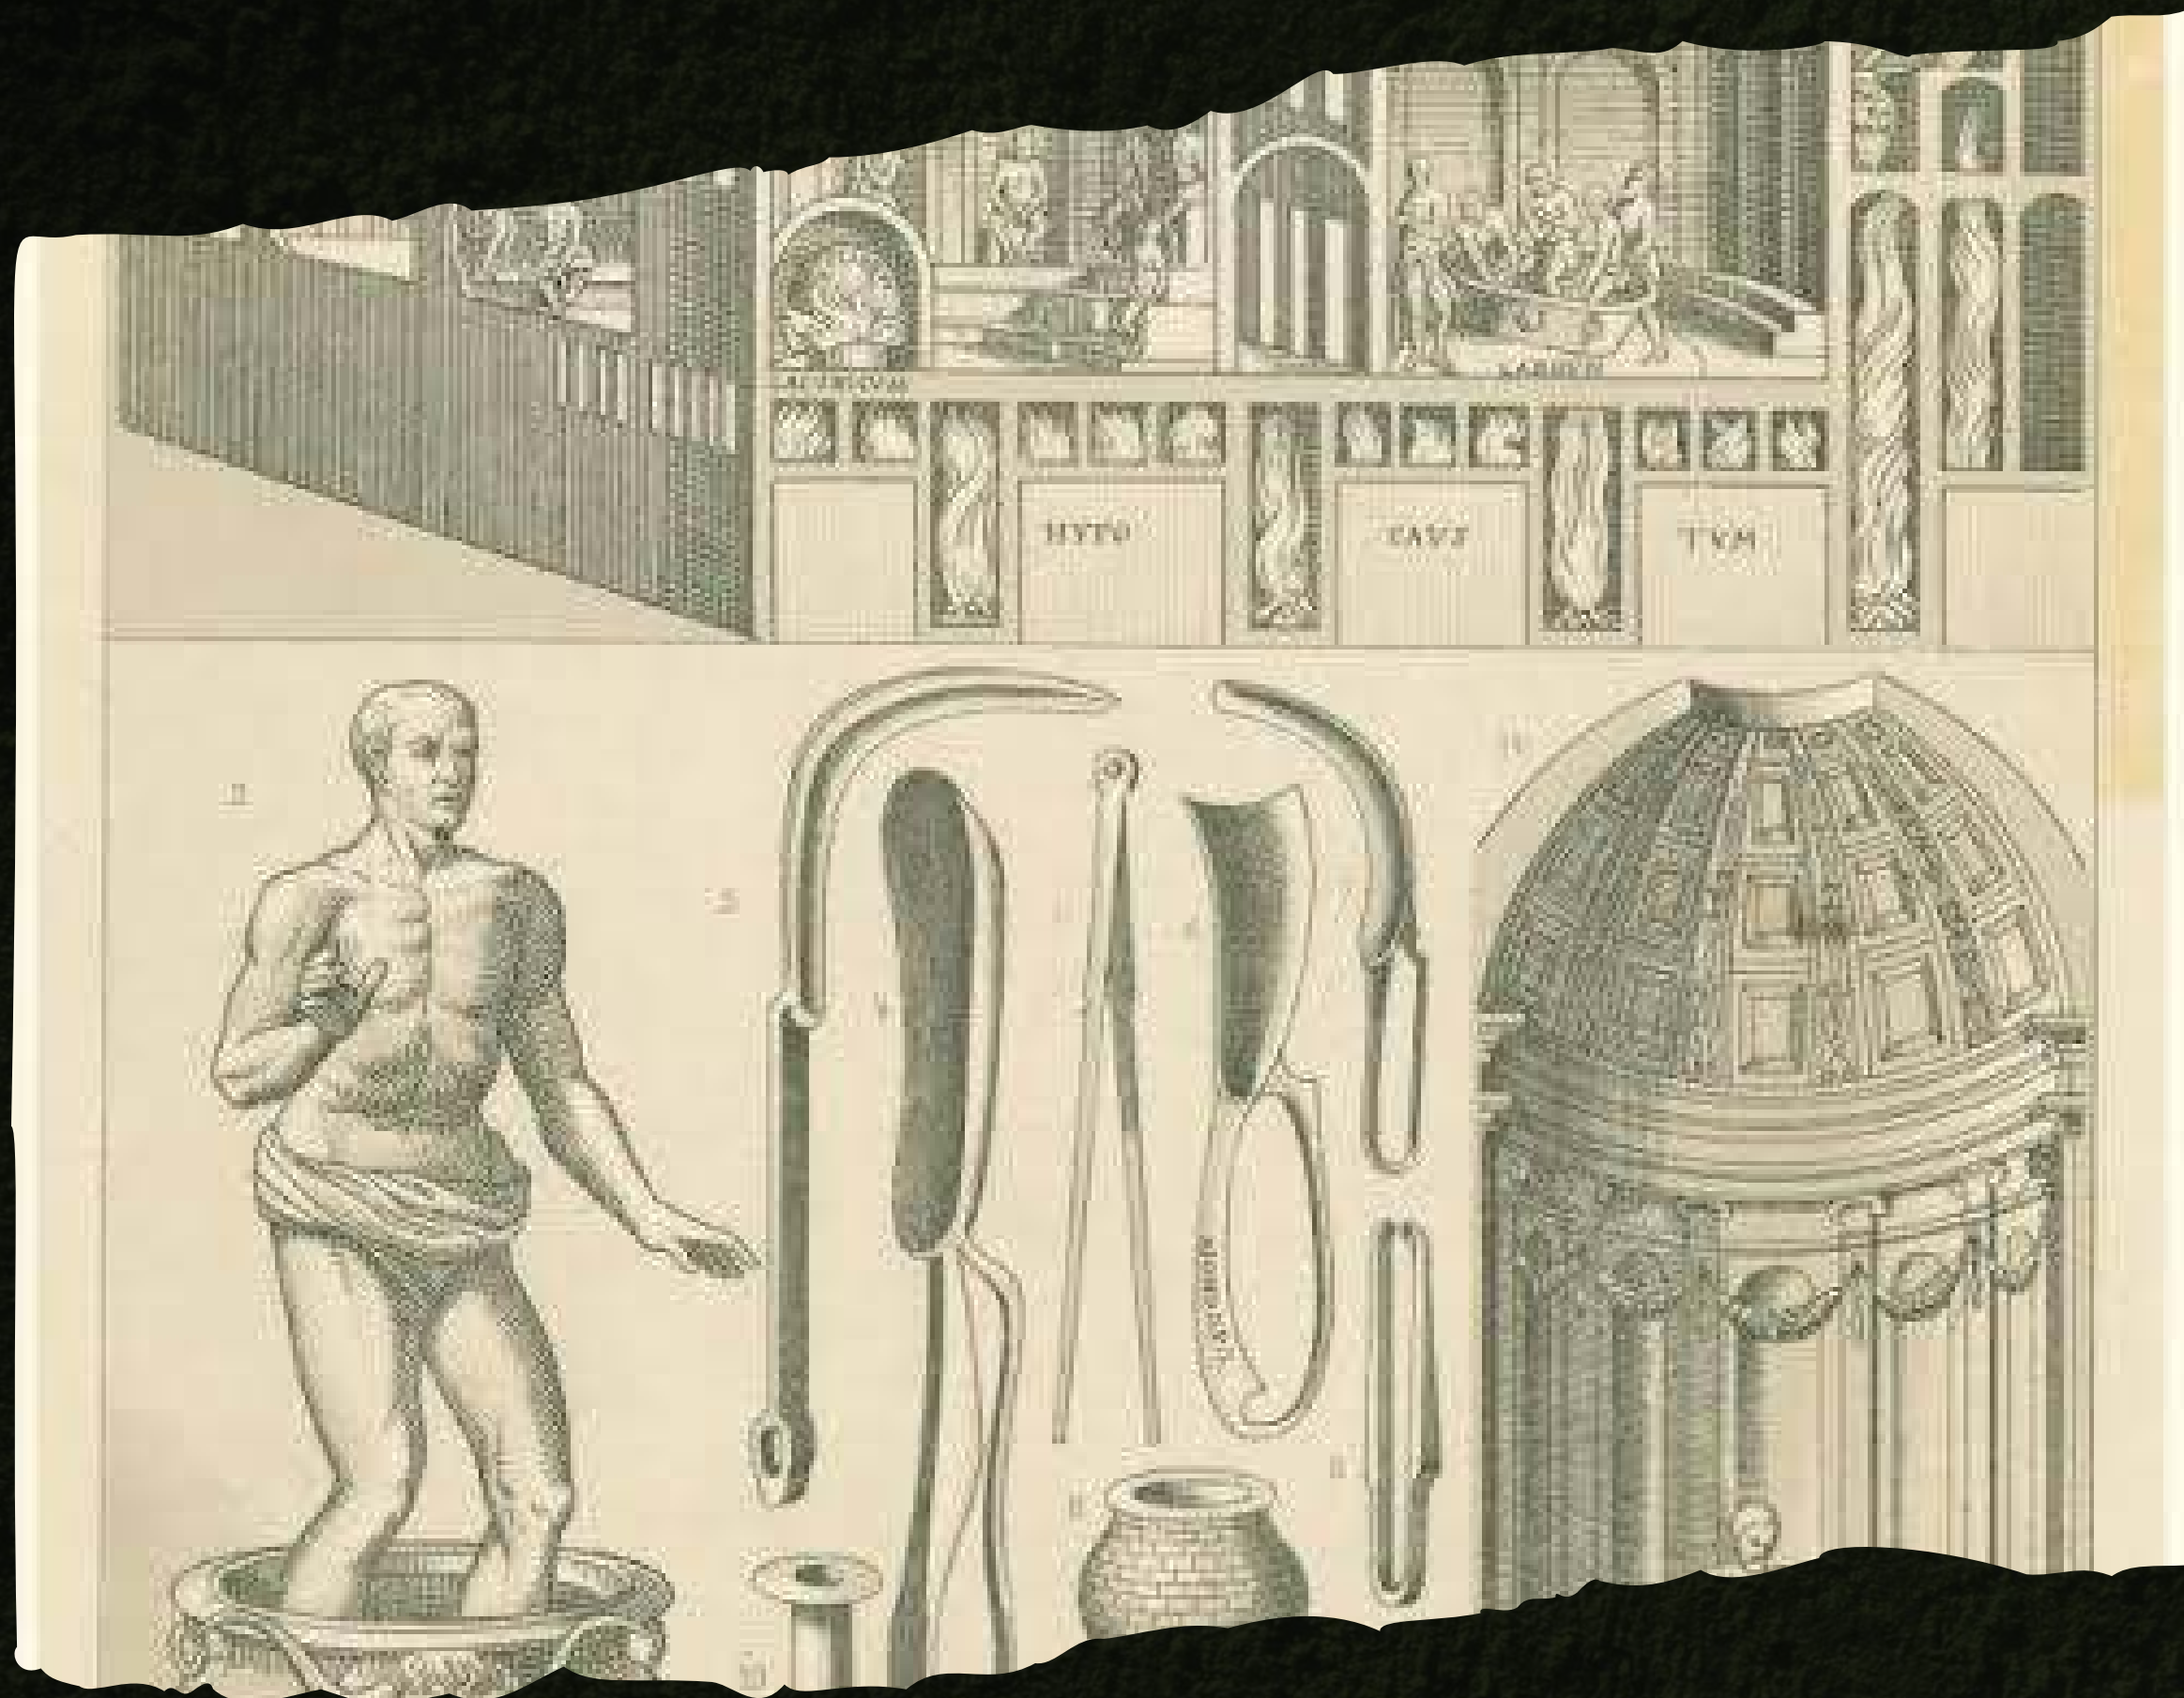

The Ancient Greeks

The Greeks adopted this idea and improved upon it by developing the first drainage systems. They invented a system that allowed water to be transported in and out of the rooms via lead piping.

And it wasn't just the wealthy few benefiting from this, they also built large, communal areas where everyone could wash together.

Roman Times

The Romans may not have built the first sewer system, yet they were pioneers in both plumbing and public health. For example, they created sewage systems for disposing of the wastewater – by 315 AD, Rome had 144 public toilets. As a group of people, they had high standards of cleanliness. The Roman's constructed large bathhouses, not only in their native land, but across Europe. However, the collapse of both the Roman and the Greek empires, lead to the technology used for showers to be put on hold for a few hundred years.

The First 'Modern' Shower

Fast forward to 1767, when the first patent for a shower was granted to William Feetham, a stove maker from Ludgate Hill in London. These early modern-day showers were powered by a hand pump and used less water than baths.

The First 'Designer' Shower

The development of the electric shower was a gradual process, starting with the English Regency Shower, and completed with the emergence of modern plumbing in the 20th Century. In the 19th Century, the English Regency Shower was invented by an unknown entrepreneur. This was the first hot water shower and was designed with a metal frame and painted to look like bamboo. It was however, still powered by a hand pump that pushed water through a tank.

Indoor plumbing was invented in late 19th Century, when people could easily use free-standing showers connected to a running water source.

Shower types

- Hand shower

- Overhead Shower

Shower types

- Side shower

- Shower systems

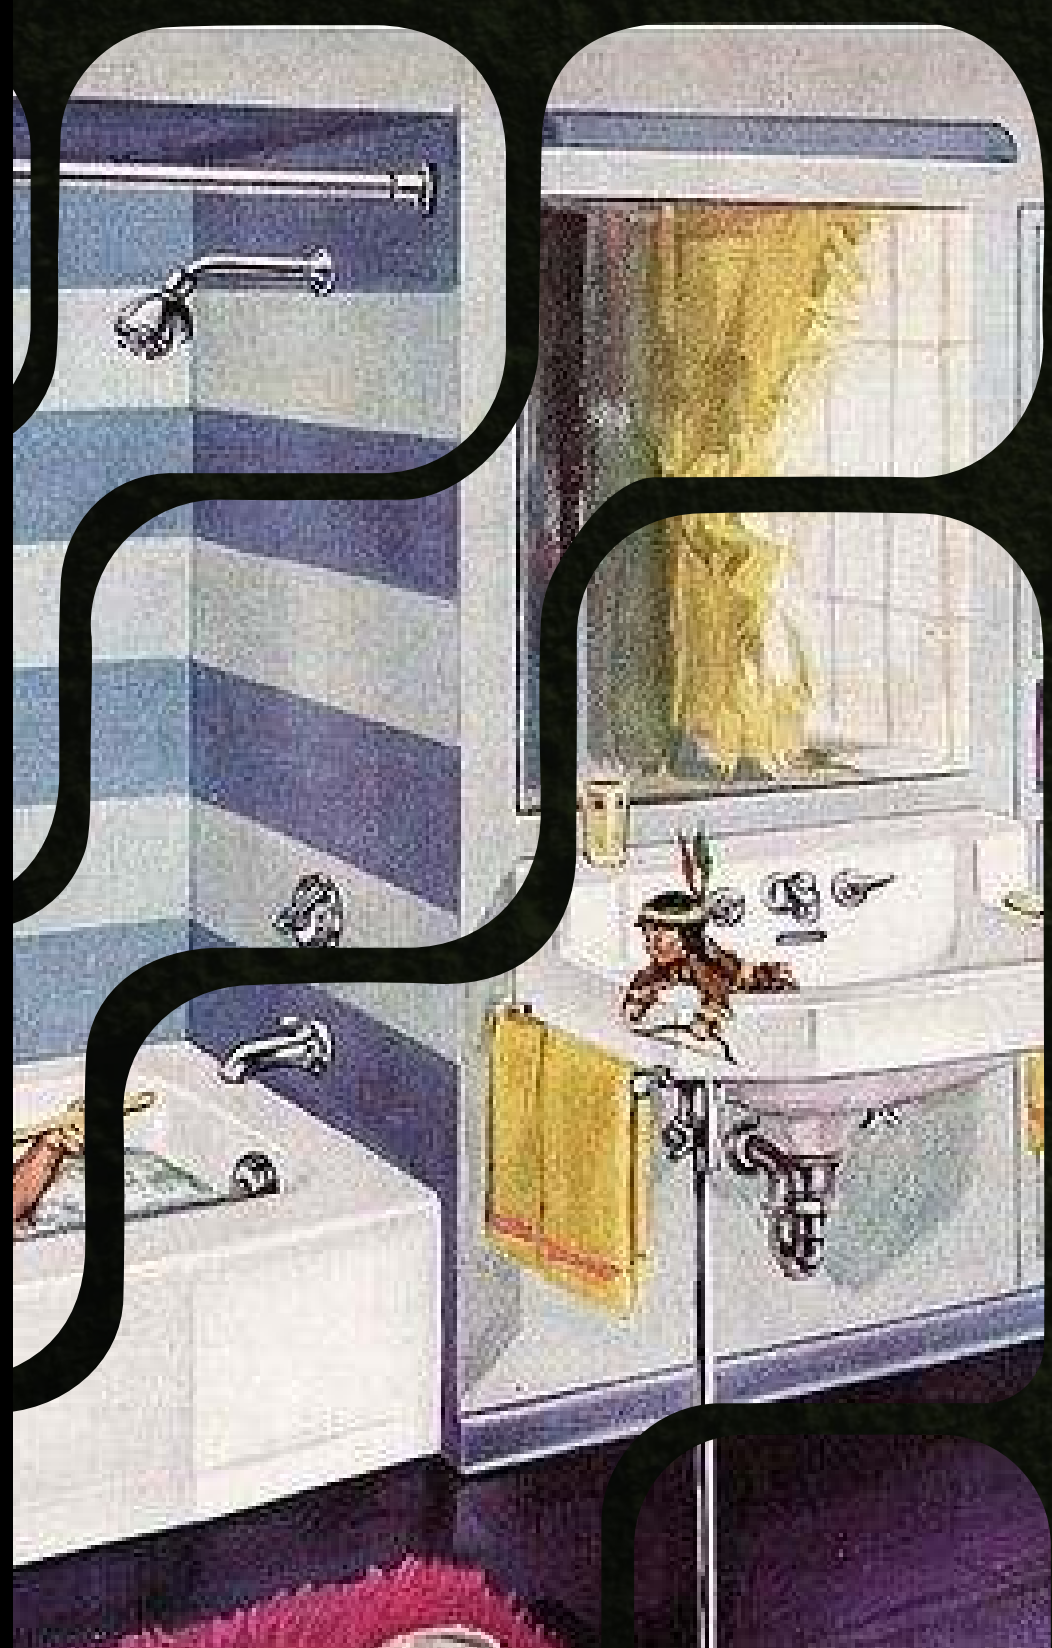

Bath tub inventions

A quick overview of the first bathtub and plumbing systems found. The invention of the bathtub and the invention of actual plumbing services date back quite a number of years ago, but are however very different from one another! The earliest discovered plumbing systems date back to nearly 6000 years ago near the Indus River Valley in India where archaeologists actually discovered copper water pipes in the excavation of the ruins of a palace in the vicinity. However, if we fast forward 3000 years ahead, this is about the time that the first 'ancestral' pedestal tub was unearthed on the island of Crete, it measured at five feet long, was made of hard pottery, and its shape resembled our modern 19th-century claw-foot tub.

The Rise and Fall of Bathing and Sanitation

From the years of 500 BC through until AD 455, the Roman Empire was championed for their daily rituals of bathing and staying clean. They very much raised the bar on acceptable sanitation and expected people of royalty and later on even the poor - to stay washed, clean and bathed. The Romans used bronze and lead pipes, marble fixtures, and went ahead to create a comprehensive sewerage system. During this era, the most common baths seen were public bathtubs, but also private baths, which resembled our modern indoor pools which usually encompassed an entire room. When the Roman Empire collapsed and the era's descended into the Dark Ages, sanitation virtually disappeared.

The Invention of the Modern Bathtub

When the end of World War I started coming to, it also brought with it a construction boom in the USA, and this seemed to increase the installations of 'modern bathtubs', sinks and toilets in many American homes. However, even though in 1921, only 1% of the populations' homes had indoor plumbing, as outhouses were still the norm in rural America.

In 1883, an American man by the name of John Michael Kohler invented the world's first bathtub. He took a cast-iron horse trough and added four decorative feet to the bottom of it and covered it in an enamel finish.

Over time, and as things started to change, the once popular claw foot tub seemed to slowly morph into the modern built-in tub with an apron front. This enclosed bathtub style provided much easier maintenance to homeowners' bathrooms and with the emergence of different colored sanitary ware, also provided more design options for the creative homeowner. It was the Crane Company that first invented various colored bathroom fixtures into the US market back in 1928.

Something changed in the 1960s, with rising prosperity in developed countries and a pop culture focused increasingly on pleasure. Adorned with sunken bath.

The Invention of the Modern Bathtub

the Whirlpool was patented in the United States by Candido Jacuzzi in 1964), the archetypal '60s bathroom was the very model of a private “bagnio”.

Since then, in affluent and fashionable homes, contemporary bathrooms have come to resemble those of opulent new or refurbished hotels, with the bathroom evolving into a sensual home spa, and an opportunity to showcase luxury or affluence to visitors.

Embrace Nature in Design

Our designs bring the outside in,
enhancing well-being with:

- **Natural Materials:** Stone, wood, clay, and glass for an organic feel.
- **Water and Airflow:** Spa-like atmospheres with efficient ventilation.
- **Lighting and Shadows:** Maximizing natural light for an airy ambiance.
- **Plants and Greenery:** Enhancing air quality and promoting serenity.
- **Earthy Color Palettes:** Neutral, warm tones for a soothing environment.

Health and Wellness

Prospaa designs bathrooms that promote health and wellness. Our holistic approach goes beyond aesthetics, offering spaces that rejuvenate the body and soul, reduce stress, and enhance daily life.

Crafting Your Signature Space

Creating a signature bathroom space is all about blending luxury, functionality, and personal style. Here's how you can achieve a standout design:

Select Statement Fixture

A statement fixture in a bathroom is a striking element that draws attention and adds personality to the space. Statement fixtures can include bathroom products you used with personalized functions.

Define Your Aesthetics

A well-placed pattern defines your bathroom aesthetic. Choosing a bold and unique design for your towels, tiles, or even your toilet and tub turns into the focal point of your entire space. On the other hand, subtle designs serve to complement other colors and features.

Playing with material and texture

With a few clever design tricks, you can soften the feel of the space. Choose tactile materials, such as cork and concrete, contrast smooth and rough surfaces, or play around with tile patterns to create a finish that's textured and pleasant to touch

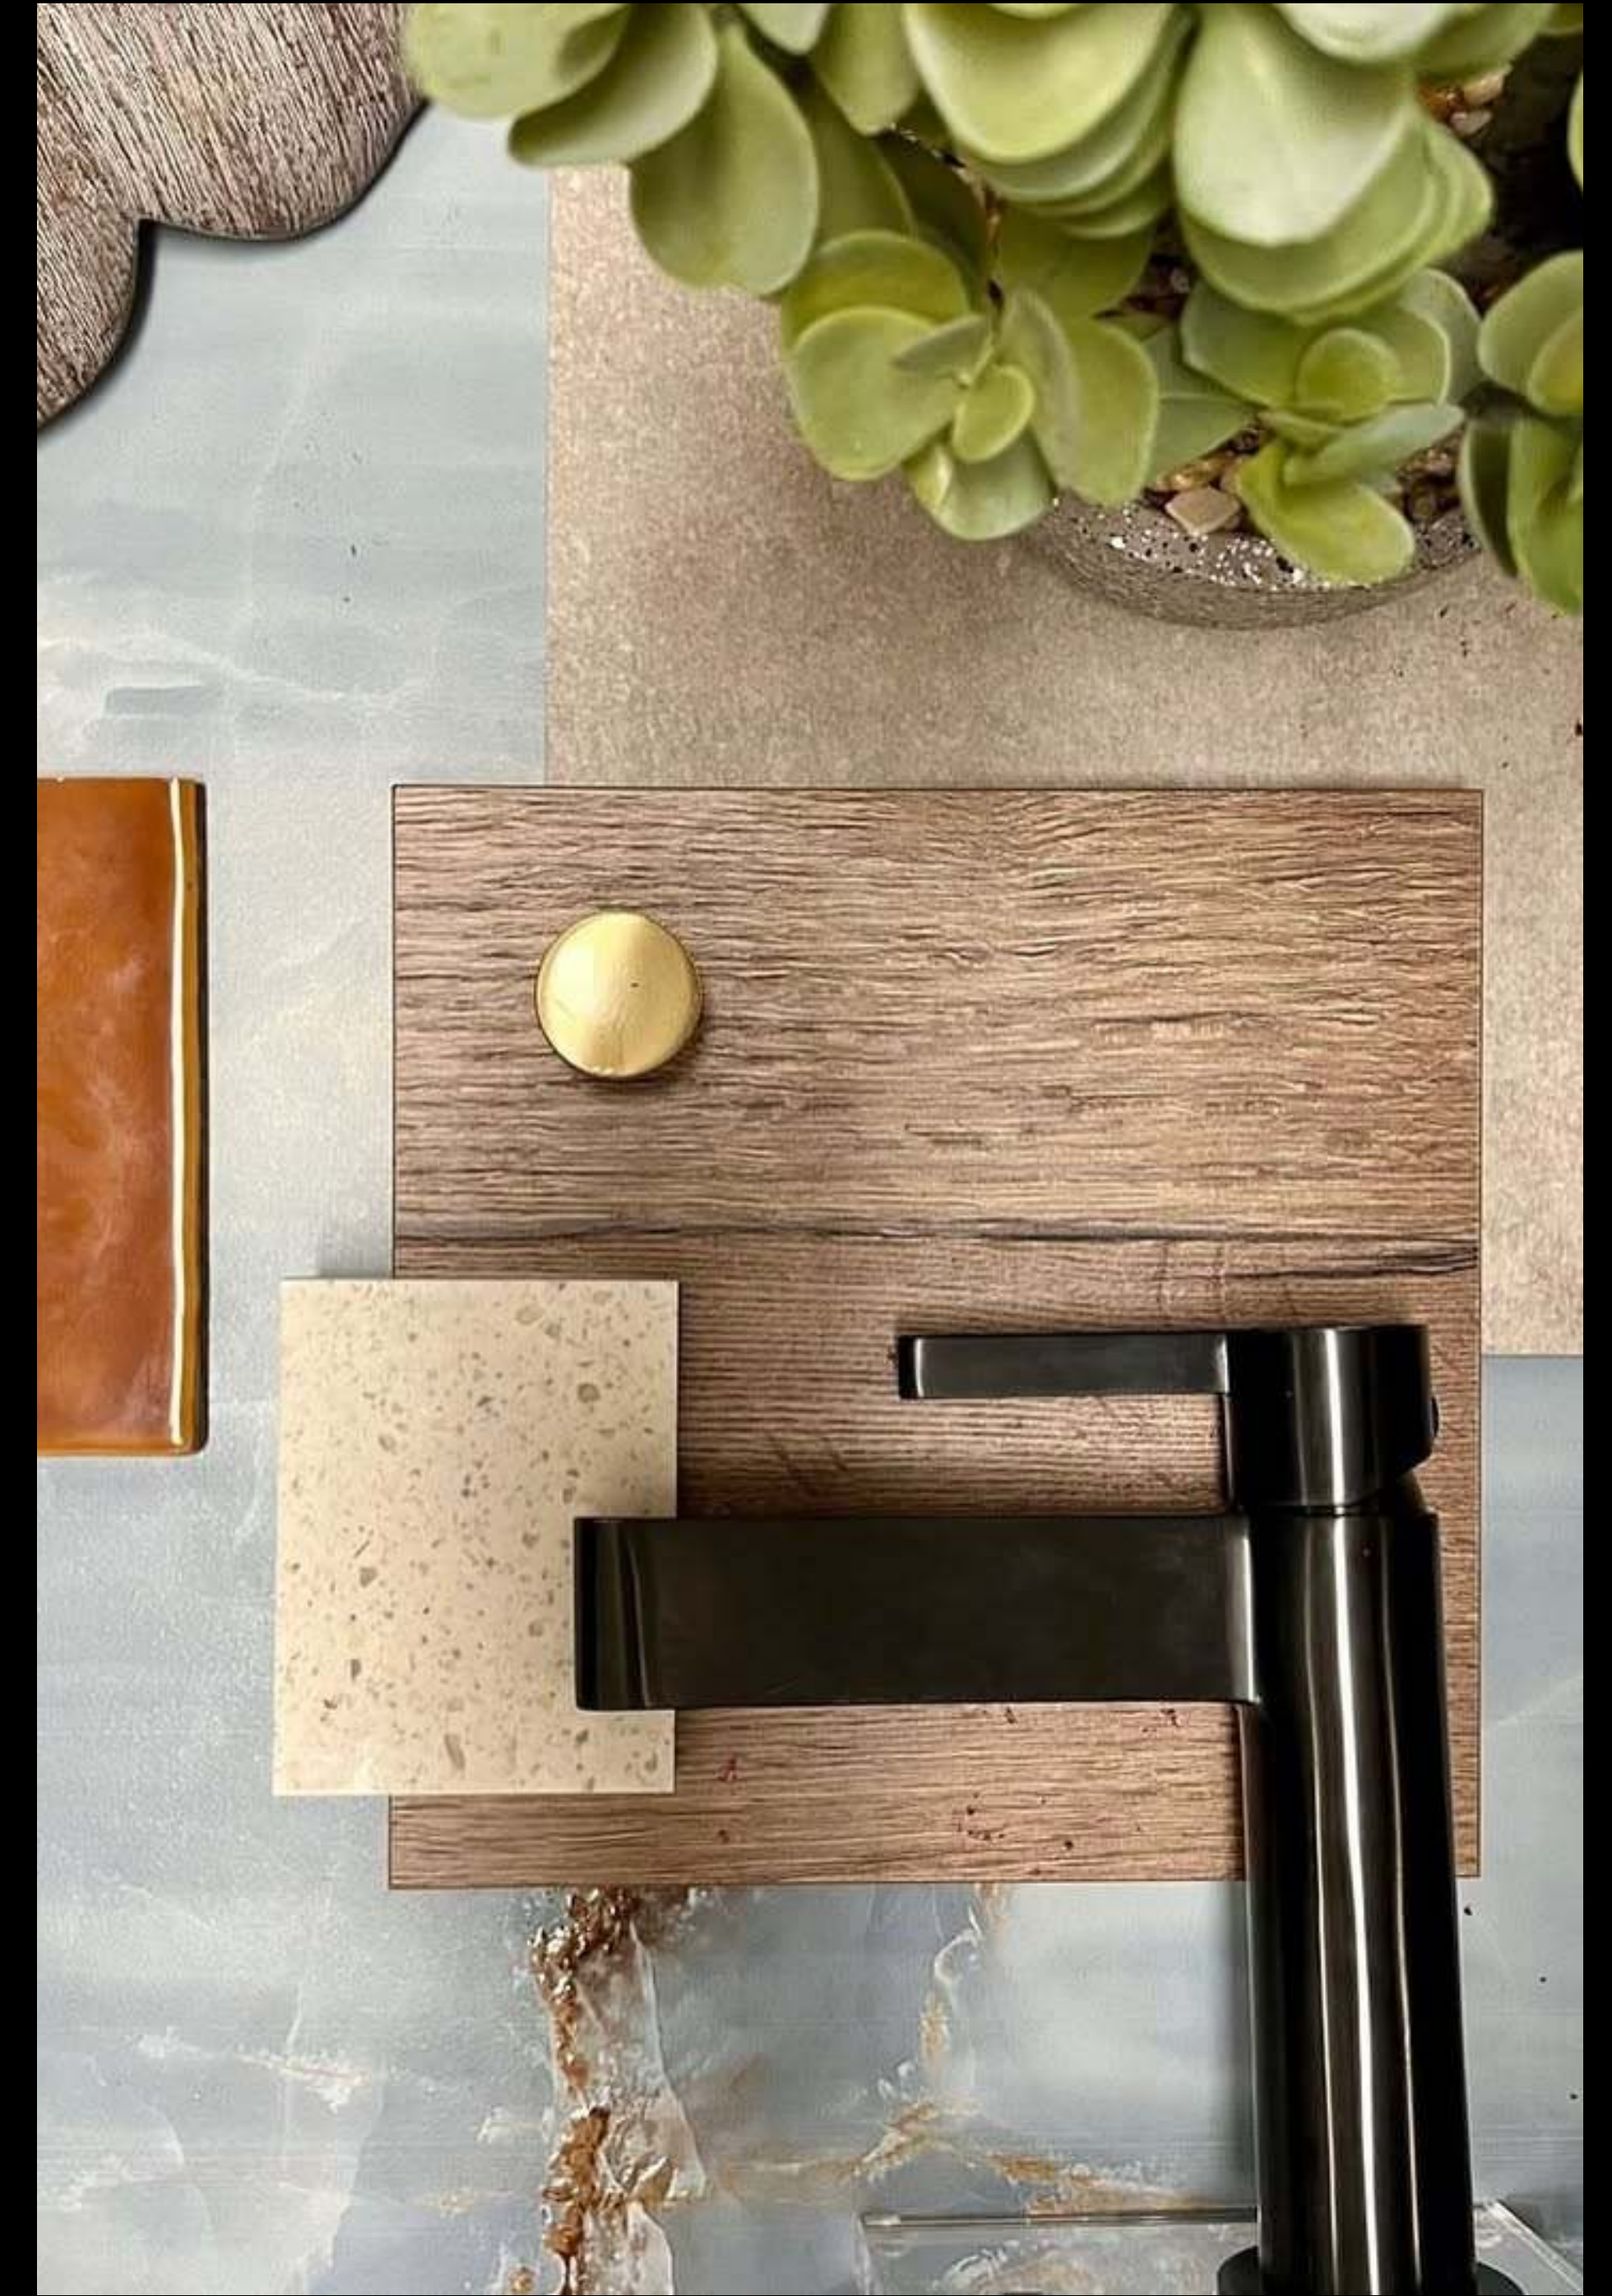

Lighting Matters

When it comes to bathroom design, lighting often takes a backseat to more obvious considerations like tiles, fittings, fixtures, or vanity units. However, proper lighting is one of the most crucial elements of your design. It can have a huge impact on the overall aesthetic and functionality.

From creating ambience to improving the functionality of the space, lighting can really make or break the look and feel of your bathroom.

Personal Touches

Personal touches are how we look out for a perfect blend, which are beyond just functions. These are little details and placement.

How we work

At Pro-Spaa, we believe exceptional results come from exceptional planning.

Our refined seven-step approach ensures your vision is realized with precision and elegance.

How we work

Consultation

We begin by understanding your ideas, goals, and budget. This step helps us align our solutions with your vision, whether it's a residential remodel or a commercial bathroom upgrade

Design & Planning

Our design experts develop custom layouts that balance functionality with aesthetics. We help you select the best materials, fixtures, and finishes to ensure every detail fits your style and practical needs.

Quotation & Timeline

We provide a detailed project estimate, outlining costs, materials, and schedules.

Transparency is key—there are no hidden fees, and we commit to delivering your project within the agreed timeline.

Supervision & Execution

Our design experts develop custom layouts that balance functionality with aesthetics. We help you select the best materials, fixtures, and finishes to ensure every detail fits your style and practical needs.

Quality Control & Inspection

We conduct rigorous quality checks at every stage to ensure that all installations, plumbing systems, tiling, and finishes meet our strict standards. Your satisfaction is our priority, and no detail is overlooked.

Handover & Client Approval

Upon completion, we conduct a final walkthrough with you to ensure everything meets your expectations. Your feedback is crucial, and we make any necessary adjustments to achieve perfection.

Aftercare & Maintenance

Our partnership doesn't end with the handover. We offer ongoing maintenance services to keep your bathroom in peak condition, providing expert support whenever you need it. At Pro-Spaa, our streamlined process ensures a smooth experience and delivers bathrooms that are beautiful, functional, and health

VR (virtual reality inspiration design)

In the evolving landscape of design development, Virtual Reality (VR) is revolutionizing the way we conceptualize, develop, and present our ideas. By integrating VR technology, we can enhance creativity, Streamline processes, improve collaboration, increase efficiency and effective design solutions, driving down delivery time and cost.

In 2024 we created our first virtual interactive bathroom space, to provide our clients with the visual aid to help ease the decision making process of choosing the bathroom products, design layout, ambiance and desired functions.

We we went further to create and curate a 2 tier design that are representative of both commercial and residential projects. This concept is to help our clients, not just in decision making but also to save time.

SPACES WE TRANSFORM

At Pro-Spaa, we believe that every space deserves a bathroom that is as functional as it is comfortable and aesthetically pleasing. Whether it's a cozy home, a bustling office, or a luxurious hotel, we tailor our designs to meet the unique needs of each environment.

Spaces We Transform

> **Residential Spaces**

From nature feel master bathrooms to functional family spaces, we create personalized designs that reflect your lifestyle and enhance daily comfort. Whether it's a new build or a renovation, our bathrooms add lasting value to your home.

> **Commercial Offices**

We design sleek, practical restrooms that align with modern office aesthetics while prioritizing employee comfort and efficiency. Our spaces are optimized for high usage, easy maintenance, and timeless appeal.

> **Hotels & Hospitality**

Guests expect luxury and comfort, and we deliver just that. We craft elegant, spa-inspired bathrooms that enhance the guest experience and align with the brand identity of each hotel. Our designs combine beauty, durability, and easy upkeep.

> **Estates & Multi-Unit Apartments**

For developers and property managers, we offer cost-efficient yet stylish bathroom solutions that appeal to tenants and buyers. With an emphasis on durability and design, we ensure every unit delivers value and quality.

Your Satisfaction

Your satisfaction drives everything we do. We work closely with you all the way—providing a **stress-free and seamless process** whilst listening to your needs, anticipating challenges, and providing personalized solutions. Whether it's a **luxurious bathroom implementation, a modern office restroom, or a timeless home bathroom design**, we ensure that your vision becomes reality, down to the finest details.

The Pro-Spaa *Dream* Team

Our team is the heart of **Pro-Spaa**, combining creativity, precision, and expertise to deliver outstanding results.

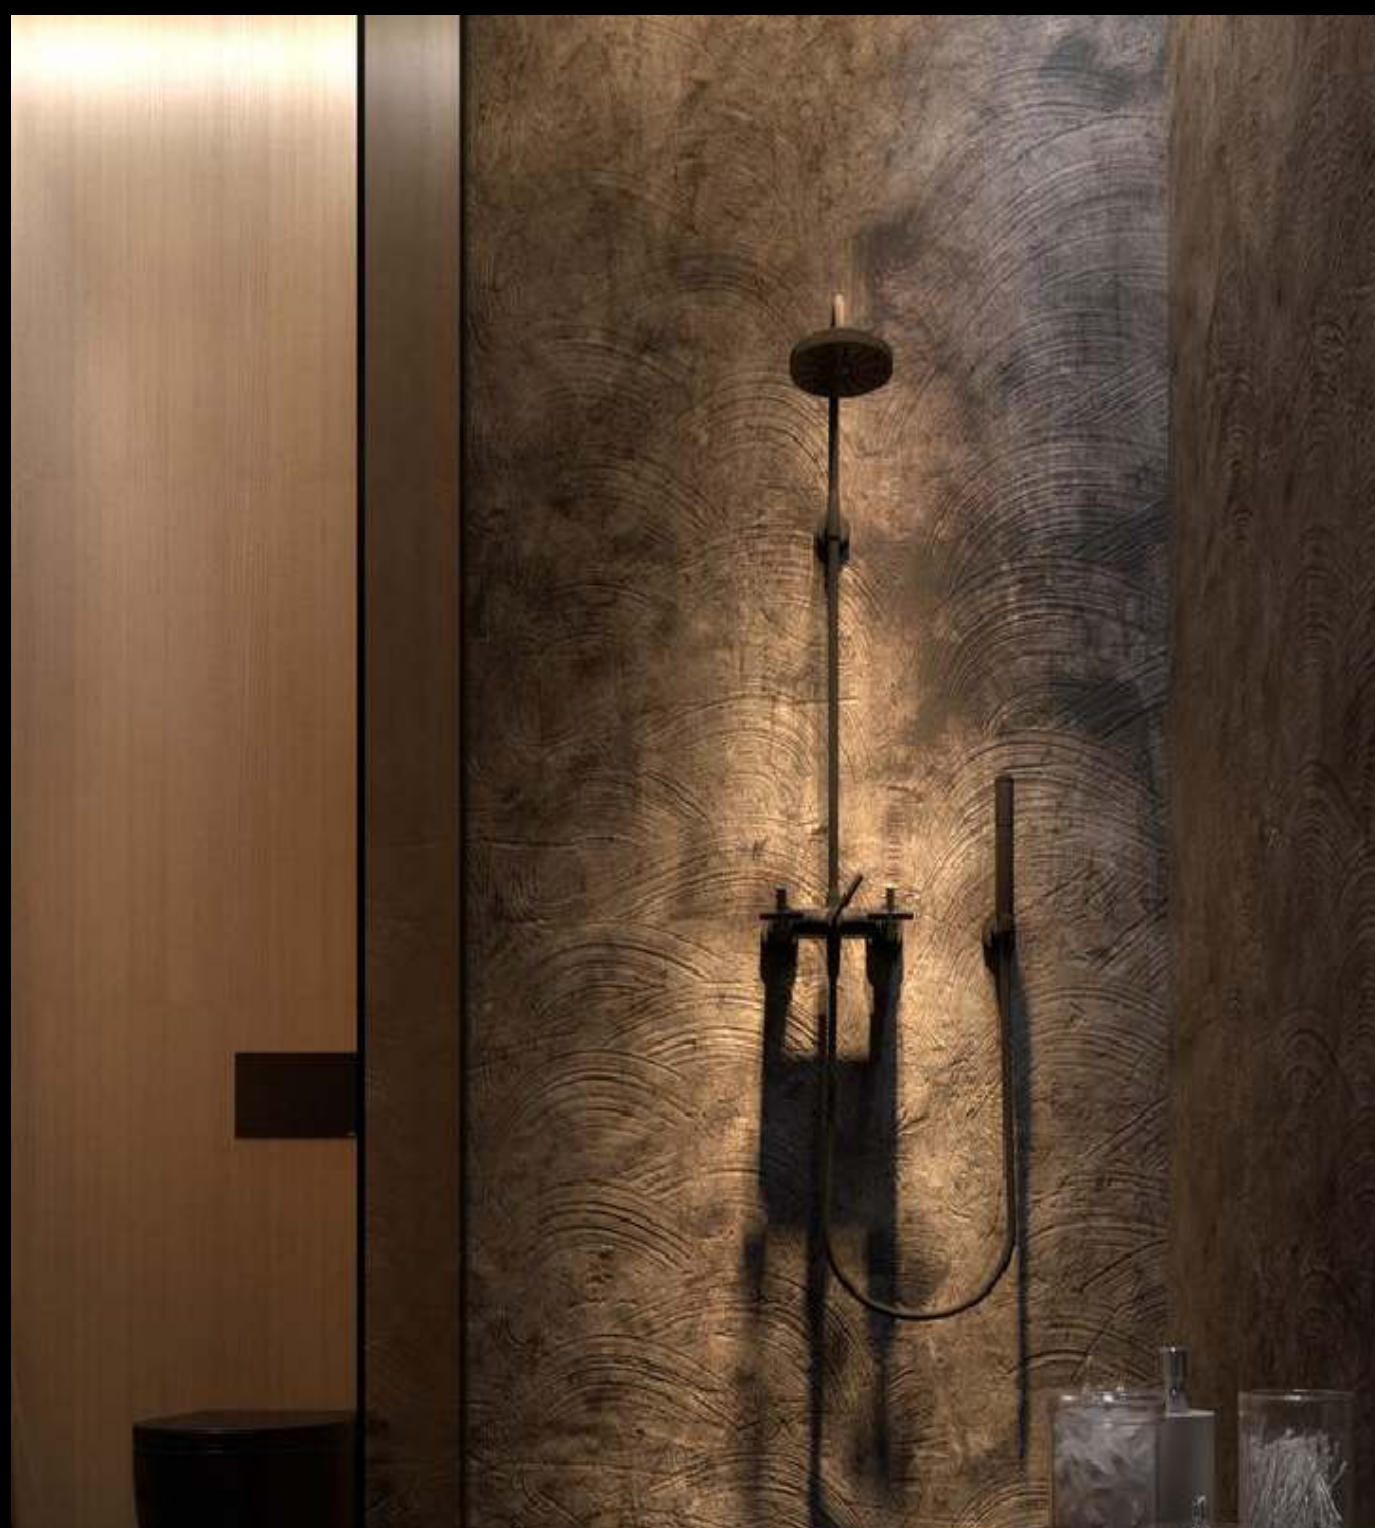

From design and planning experts who transform ideas into functional, beautiful spaces, to engineering and plumbing specialists ensuring flawless installations and efficient systems, every member plays a vital role.

Our tiling and surface experts craft perfect finishes with attention to detail, while the product supply and logistics team guarantees timely delivery of **premium products**. Finally, our maintenance professionals provide expert aftercare, keeping bathrooms in top condition long after project completion.

Together, the **Pro-Spaa team** is driven by a shared passion for innovation and excellence. With a commitment to teamwork, loyalty, and continuous improvement, every member of our organization plays an integral role in delivering experiences that exceed expectations.

At **Pro-Spaa**, we understand that a successful project requires more than just products and expertise. It requires collaboration, trust, and a relentless pursuit of perfection—qualities that define our **CEO and every member** of our exceptional team. Let's build something extraordinary together
